Technical Sheet

KOL
Stoper

Stopery KOLLIBRODD® są używane do zabezpieczania ładunków i są umieszczane w pojazdach transportujących między paletami a podłożem drewnianym lub drewnopochodnym. Stosowane są wraz z zabezpieczeniem towarów za pomocą pasów napinających. Stopery KOLLIBRODD®, które znajdują się w specjalnym bardzo cienkim opakowaniu nie powinny być z niego wyjmowane, gdyż w ten sposób można je łatwiej stosować – umożliwia to ich kontrolowanie i bezproblemowe odnajdowanie. Wersje prostokątne (50x65) mogą być stosowane w przypadku towarów na paletach opasanych taśmą ściągającą.

Features

Materiał

DC01

Zaleta

- It is used in conjunction with cargo securing straps.
- The KOLLIBRODD® load securing device remains in its shrink-wrapped packaging during use to facilitate handling, inspection, and retrieval.
- The square versions (50x65) can be used for goods on pallets secured with strapping.

Applications

Wsparcie

- Wooden pallets on wooden floors

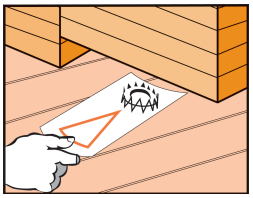

Użycie

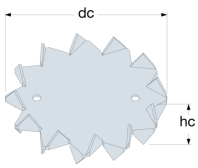

- Preventing items, such as wooden packaging units, from sliding on loading areas.

Montaż

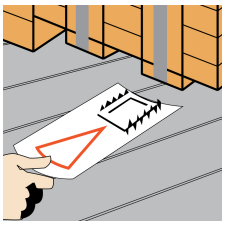

Materiał

KOLLIBRODD® Load Stoppers are placed between pallets and the wooden or wood-based floors of transport vehicles to secure the load. They are used in conjunction with load-securing straps. When using hardwoods, check that the product can be pressed into the wood.
When in use, KOLLIBRODD® Load Stoppers remain in their skin packaging for easier handling, inspection, and retrieval. The square versions can be used for goods on pallets secured with strapping.
